

Calibration

what are you putting your trust in for food safety?

As a food producer, it is your responsibility to make sure you deliver safe quality food – every time. Your HACCP system will have identified critical control points where you need to be confident that the process is under control – every time. Part of this is ensuring you are using reliable accurate measuring instruments. Calibration involves comparing the reading of an instrument being calibrated with that of a reference instrument, under specific conditions.

Other important aspects of calibration include documenting the deviation recorded, calculating the resulting measurement uncertainty and creating the calibration certificate. You may need to adjust the piece of equipment if it is found to be out of calibration. The calibration of measuring instruments is an essential part of quality assurance, contributing to the prevention of rejects, reworking, or claims for compensation. Your local authorized Testo partner will be happy to advise you on the various calibration services available for your measuring instruments.

What is included in a **Testo calibration**:

- Pre-calibration check
- Calibration
- SANAS calibration certificate
- Yearly calibration reminder

We offer the following SANAS accredited **calibration parameters**:

- Temperature
- Humidity
- Fluegas
- Infra red

We can assist you with non-SANAS accredited **calibration for:**

- Pressure (non-SANAS)
- Velocity (non-SANAS)
- Sound (non-SANAS)
- Flow (non-SANAS)

What about a convenient onsite calibration? **We can help with:**

- Temperature - On-site
- Humidity - On-site
- Mapping – On-site (temperature and humidity)
- Autoclaves (temperature mapping, pressure log and time log)

The Testo calibration lab has state of the art reference equipment and technology to ensure we complete your calibration with a quick turnaround of five to ten business days and keep your instruments reading spot on.
